

Complete Redesign Proposal & Feature Alignment Guide

Comprehensive Overview of Redesigned UX/UI & Backend Features

Dear Skynet Project Team,

We have completed the comprehensive redesign of the Skynet Global Logistics portal, upgrading it to a premium, full-stack enterprise platform. This document provides a visual walkthrough of all features (including frontend interfaces, interactive calculators, live timezone trackers, and the administrative dashboard).

Ø=Ý TEST THE LIVE INTERACTIVE SITE:

You can test and interact with the live redesigned website on your desktop or mobile device using our secure external link: <https://burdened-downwardly-arielle.ngrok-free.dev>

Most sections are equipped with interactive controls and realistic placeholder data. To align the platform with your daily operations, we have compiled an overview of each component along with the key business inputs required from

Ø=Ü; SMART FEEDBACK TIP FOR CO-WORKERS & CLIENTS:

To save time, you do not need to write replies to each question manually! You can copy-paste the text of this PDF or upload the screenshot pages directly into an AI assistant (such as ChatGPT, Claude, or Gemini) and prompt it:

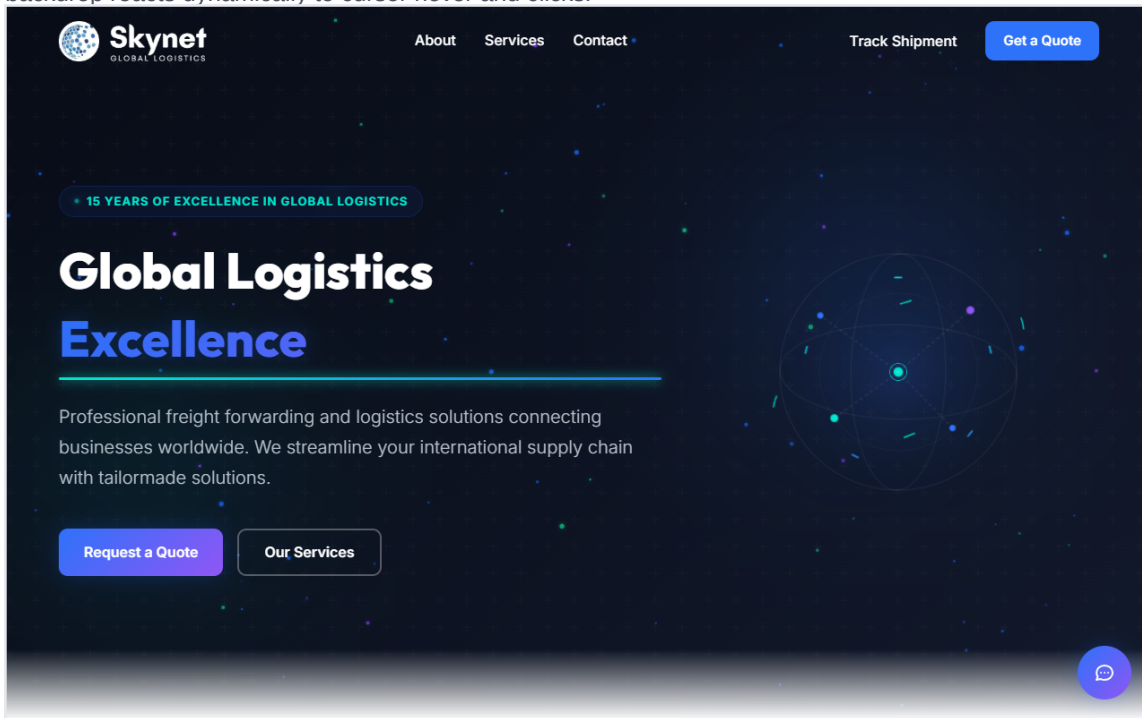

"Based on these questions and screenshots, write a clean response with my business details: [Insert your rough business notes here]."

This will instantly generate formatted text copy ready to send back to our developers.

DOCUMENT SUMMARY & METADATA	
Prepared For:	Skynet Global Logistics Management Team
Prepared By:	Development & UX Design Team
Current Date:	June 5, 2026
Portal Status:	Development Complete - Awaiting Content Sign-off

1. Redesigned 2-Column Hero & Animated Backdrop

We split the hero section into a clean 2-column grid. The left holds typography with an active keyword swapper (Excellence, Efficiency, Reliability, Connectivity). The right displays a custom rotating wireframe globe. A magnetic splattered particle backdrop reacts dynamically to cursor hover and clicks.

REQUIRED OPERATIONAL CLARIFICATIONS & QUESTIONS:

- Do the rotatable keywords (Excellence, Efficiency, Reliability, Connectivity) reflect the core values of your company?
- Do you have any primary marketing headings or specific button labels you would like us to swap?

2. Live Shipment Tracker Widget

We built an interactive Shipment Tracker linked directly to our MongoDB database, rendering full event-log timelines. This feature enables clients to search their tracking code and view shipment events in real-time.

Track Shipment

Enter your 10-digit consignment number to track your shipment live.

Suggestions: SKY-102948 (Delivered) SKY-987654 (Transit)

SKY-987654

Track

Status: In Transit

SKY-987654

Arrived at Intermediate Hub

Singapore Cargo Transit Depot

June 04 at 05:40 AM

Departed Hub

London Heathrow Airport Terminal 4

June 03 at 10:00 PM

Information Received

Consignment booked, pickup completed at sender warehouse

June 02 at 01:15 AM

REQUIRED OPERATIONAL CLARIFICATIONS & QUESTIONS:

- Since the shipment tracker currently operates on mock consignment data (e.g. SKY-102948 / SKY-987654), do you have any specific tracking code formats or mock data paths you would like us to pre-populate?
- When you are ready to transition to live data, what API endpoints or database connections should we integrate to fetch actual shipment timelines?

3. Interactive AI Chatbot Support Widget

A floating live chatbot widget resides in the bottom right corner of the website. It assists users with common FAQs (like volumetric weight formulas) and queries consignment codes directly via our REST API.

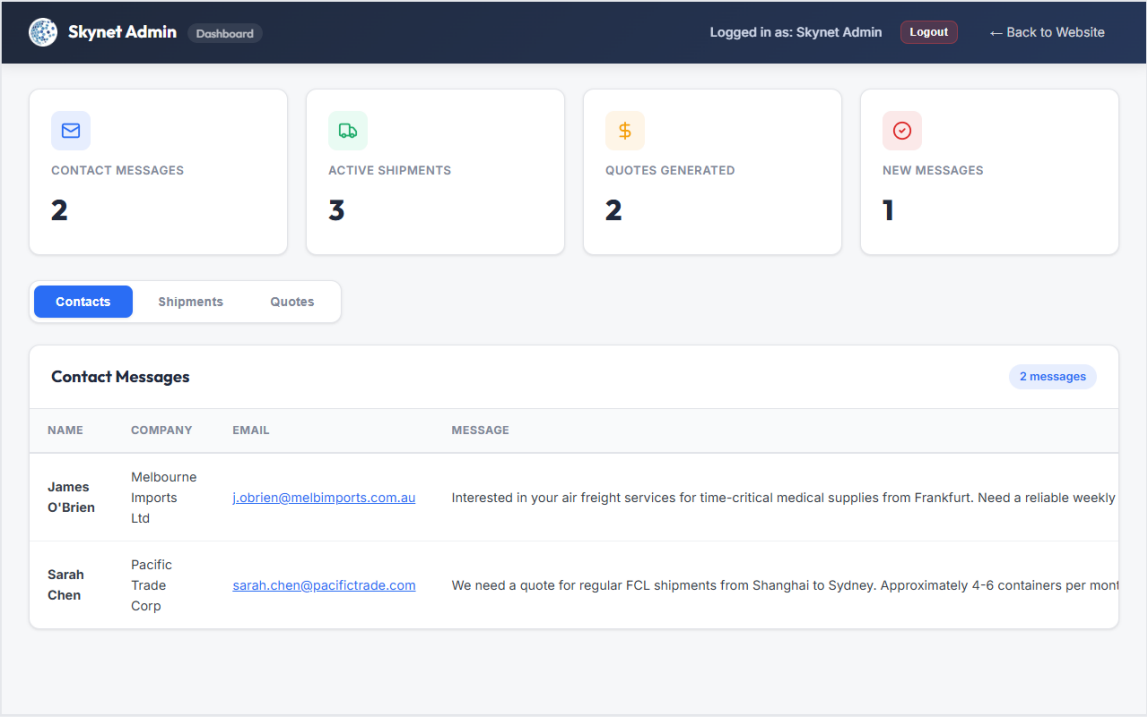

REQUIRED OPERATIONAL CLARIFICATIONS & QUESTIONS:

- Are the default chatbot FAQs (such as volumetric weight calculations and support hours) correct, or would you like to define custom automated replies for specific customer questions?
- Would you like us to implement any other chat options or integrate this widget with an external live support platform (like Zendesk or Intercom)?

4. Secure Administrative Panel & Auth Dashboard

A secure control room is accessible at /admin. Login blocks unauthorized traffic and enforces Bearer JWT token validations. The control panel allows administrators to edit shipment tracking milestones and manage client contact/quote inquiries.

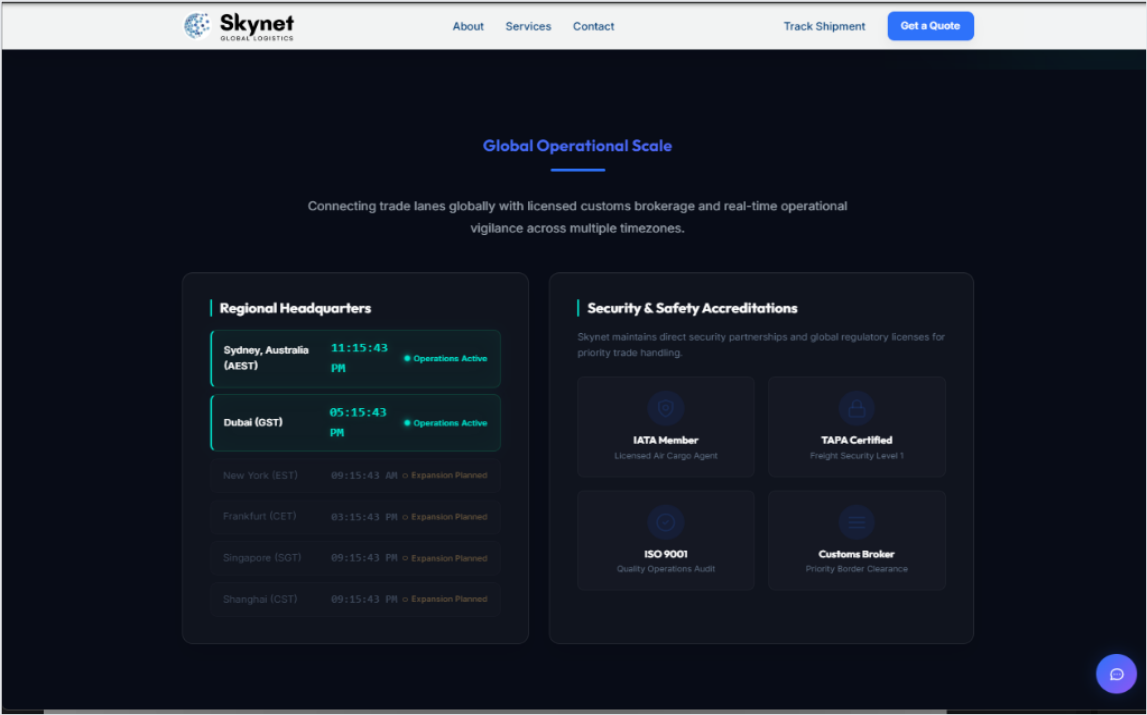

REQUIRED OPERATIONAL CLARIFICATIONS & QUESTIONS:

- What default administrator credentials and role access requirements should we configure for the live database deployment?
- Do you require specific log exporting formats or automated email/SMS alert protocols when contact/quote inquiries are received?

5. Global Operational Scale (Clocks & Accreditations)

We added live clock tickers for your core regional offices to show 24/7 global coverage. Active offices pulse green with "Operations Active", while planned regions are dimmed with "Expansion Planned". We also added key cargo compliance badges to build trust with enterprise clients.

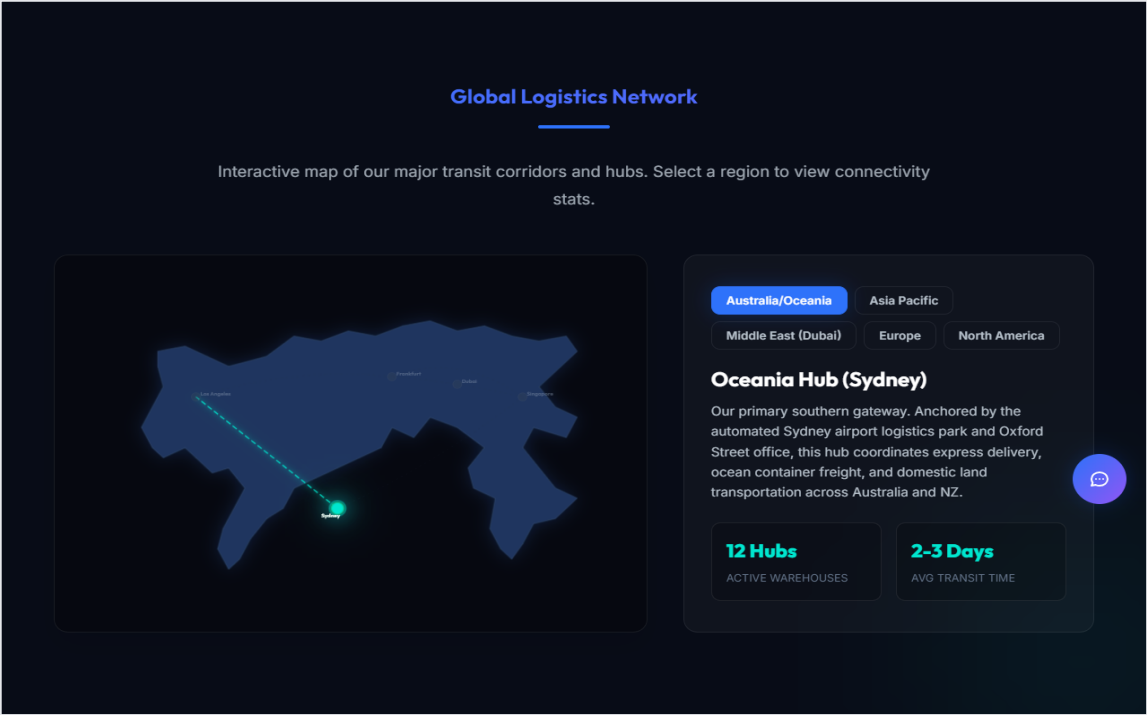

REQUIRED OPERATIONAL CLARIFICATIONS & QUESTIONS:

- What are the actual active administrative locations of your company that we should set to "Operations Active"? Are Sydney and Dubai correct, or are there others?
- Are the listed compliance badges (IATA Member, TAPA Certified, ISO 9001, Licensed Customs Brokerage) correct for your logistics operations, or should we modify this list?

6. Interactive Global Logistics Route Map

We designed an interactive SVG world map showing transit corridors. Clicking a region button or node (such as Australia/Oceania) dynamically animates the active trade lane in bright teal and reveals a dashboard card listing regional hubs and transit speeds.

REQUIRED OPERATIONAL CLARIFICATIONS & QUESTIONS:

- Does this geographical coverage (North America, Europe, Middle East, Asia Pacific, and Australia/Oceania) accurately reflect your company's primary service corridors?
- Are there any major regional hubs or transit paths that we should add or remove from this map?

7. Logistics Fleet Showcase (Air & Ocean)

We built a tabbed switcher displaying your shipping equipment. It currently details the Air Cargo freighter specs (B747-8F capacities) and Ocean Container Ships, equipped with a slow cinematic float animation, overlays, and hover zooms for interactive feedback.

Our Logistics Fleet

High-performance transport vehicles powering our worldwide deliveries.

Air Cargo Fleet

Ocean Container Ships

Global Air Freight Network

Equipped with dedicated Boeing B747-8F freighter aircraft, our air cargo network delivers high-priority packages to over 100 countries. Perfect for time-critical supply chains, electronic components, and medical deliveries.

✓ Capacity

134 Metric Tons per Flight

✓ Average Speed

850 km/h Live Flight Speed

✓ Corridors

Daily EU-Asia-Australia Flights

✓ Features

Temperature-Sensitive Cargo Bays

REQUIRED OPERATIONAL CLARIFICATIONS & QUESTIONS:

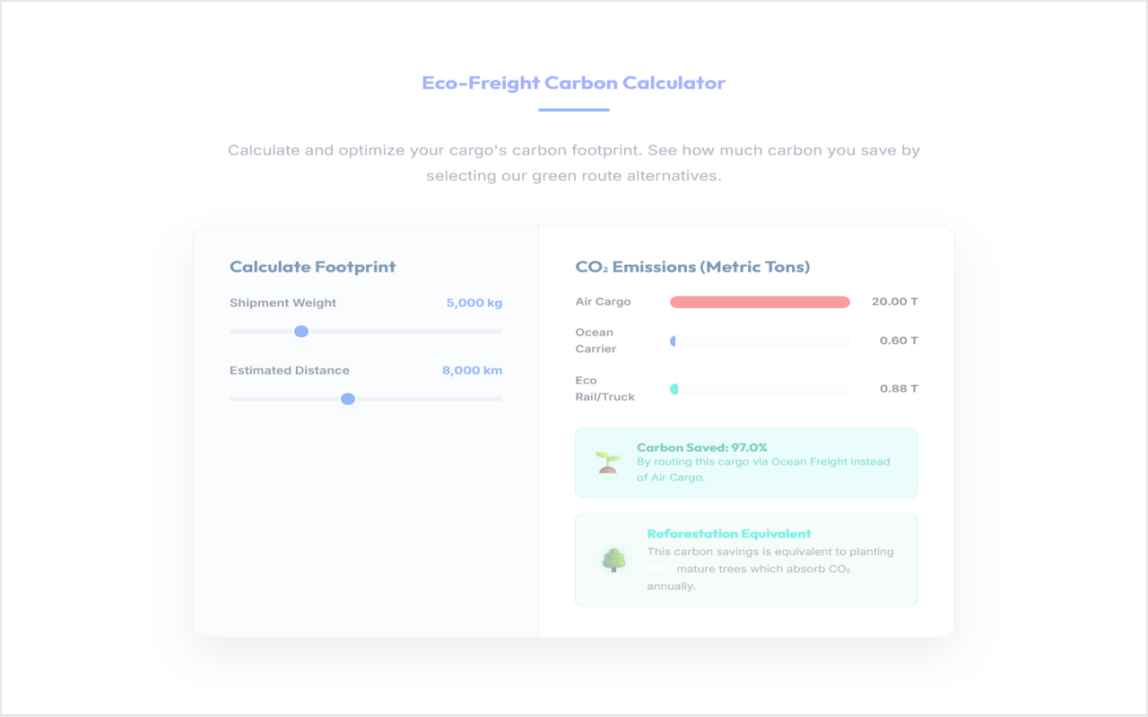

- Aside from Air Cargo and Ocean Liners, do you operate any other transport modes (e.g., Land transport, rail freight) that we should highlight as a tab?

Skynet Global Logistics Redesign — Feature Feedback Request

Page 8 of 12

8. Eco-Freight Carbon Emissions Calculator

To support green corporate initiatives, we integrated a calculator allowing users to drag weight and distance sliders. It automatically computes CO2 emissions and trees saved when shipping via green routes, using animated numbers that ease into place.

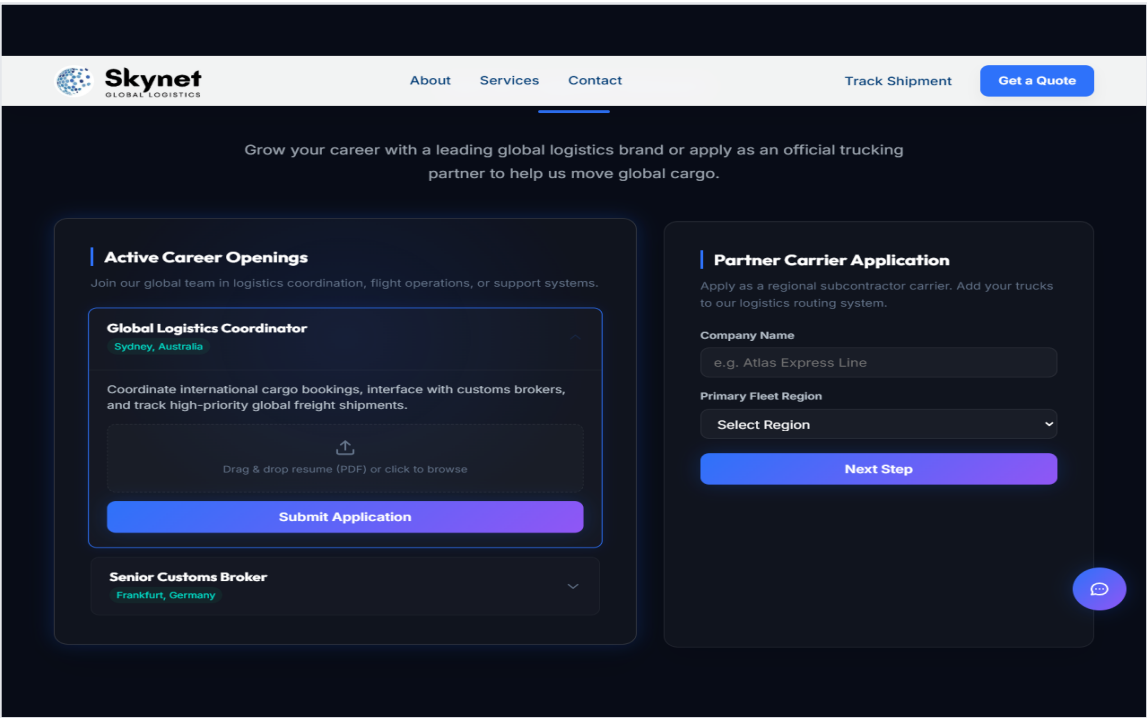

REQUIRED OPERATIONAL CLARIFICATIONS & QUESTIONS:

- The carbon calculator currently uses standard global averages. Do you have any custom sustainability metrics or specific reforestation corporate partnerships we should list instead?

9. Careers Openings & Subcontractor Onboarding

We added an Active Career Openings accordion with a drag-and-drop resume uploader (for roles in Sydney and Frankfurt), alongside a progressive Multi-Step Subcontractor Carrier Onboarding Wizard to gather partner truck and fleet profiles.

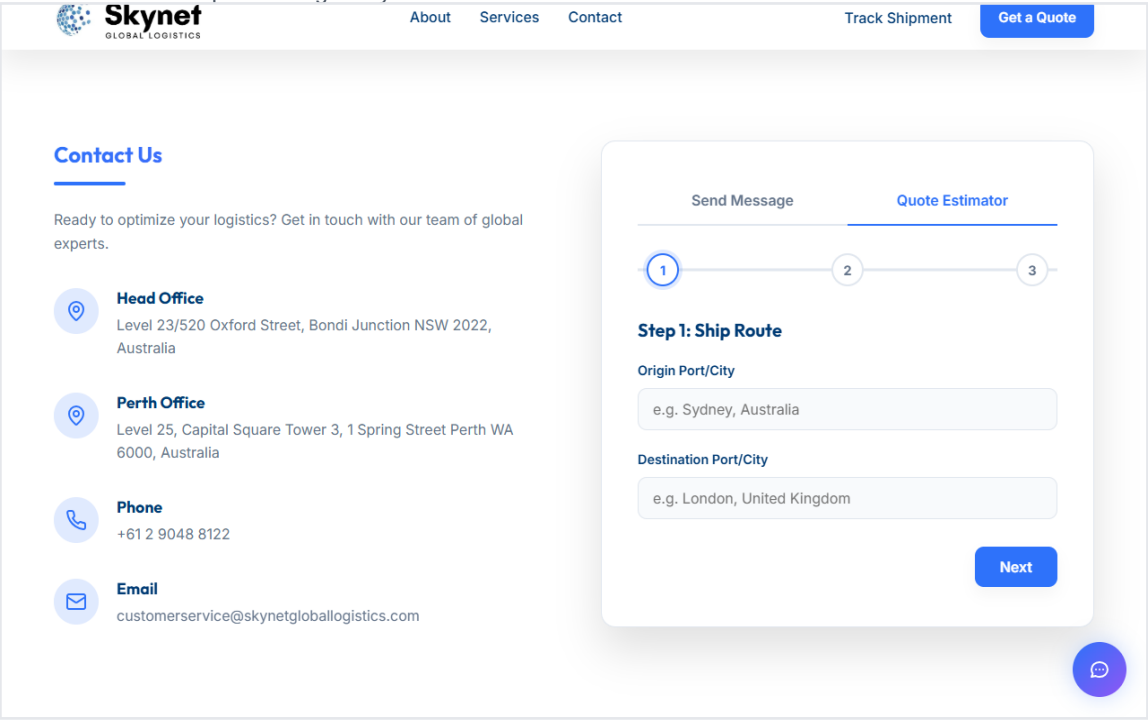

REQUIRED OPERATIONAL CLARIFICATIONS & QUESTIONS:

- What fields, document upload requirements, and partner carrier verification rules should be added when transitioning this onboarding flow from mock to live databases?
- Are there any specific external applicant tracking systems (ATS) or HR platforms we should connect the career applications to in the future?

10. Contact Form & Stepper-Based Quote Wizard

We redesigned the contact interface into clean swappable tabs. The first tab enables users to send direct messages to your inbox. The second tab launches a multi-step pricing estimator wizard, guiding the user through route inputs, cargo weights, and volumes with a processing delay animation.

REQUIRED OPERATIONAL CLARIFICATIONS & QUESTIONS:

- Since the quote calculations currently use distance-based estimation rules with simulated data, do you have a specific rate structure or formula to integrate for live pricing?
- What SMTP mail server configurations or API endpoints should be set up to deliver contact form messages directly to your inbox?

Design Opinion & Revision Sign-off Protocol

This document represents the first design revision draft of the Skynet Global Logistics portal redesign. To progress towards launch, we require your confirmation of the visual direction and any content changes. Finalizing these inputs now helps us avoid making assumptions or sourcing incorrect public data ourselves.

REVISION & SIGN-OFF CHECKLIST:

- 1. Visual Style & Theme: Do you approve the premium dark-glassmorphic layouts, neon blue/teal highlights, and physics-based animations (particle canvas and globe)?
- 2. Feature Usability: Are you satisfied with the flow of the shipment tracker, carbon calculator, chatbot widget, and onboarding forms?

3. Client Content Revisions: Do you have specific corrections (text, coordinates, office addresses) you want us to apply in the next revision?

Please review the screenshots and questions inside this guide. Once you have compiled your feedback (either manually or using the AI suggestion tool), please return it to our team. We will immediately implement your revisions for the final production build.
